SMALL ON PURPOSE · PREMIUM BY DESIGN

The Family Office Operating System

One private system that holds everything you handle — so every client stays known, nothing ever leaves your walls, and the office stays boutique while the work scales.

ENGAGEMENT
Single-family office build

MODEL
Boutique · by design

Small on purpose. Premium by design.

Your office is intentionally boutique — a handful of athletes and their families, each served personally by you. That scale isn't a limitation; it's the entire value. It's what lets you offer a level of confidentiality, judgment and attention no large shop can match.

IN YOUR WORDS

"This helps me a lot — especially working solo. It brings together the things that make my life easier."

Extreme confidentiality

A private, dedicated environment — nothing shared, nothing leaked. What you handle never leaves your walls.

Personal, not processed

Every client is known, not ticketed. The system is shaped around how *you* work — your language, your relationships.

Premium at any scale

The office stays lean while the system carries the load — so you can grow the relationships without growing the overhead.

The hard part isn't the work. It's holding it all together.

The day is spent **coordinating**: clients, family, lawyers, accountants, banks, insurers, agents, contractors — dozens of open threads at once, all running through one person.

IN YOUR WORDS

“The challenge isn't doing the work — it's having a system to organize, prioritize and follow up.”

You don't need to do more. You need a system that holds it for you.

What you described isn't a tool — it's structure around the information, tasks and knowledge that pile up with every client. Six things, again and again:

One place for everything

Every client, document and thread, in a single home.

Instant retrieval

Find any document or conversation in seconds.

Every follow-up tracked

Nothing pending with a third party slips through.

What needs you now

A clear view of now versus what's waiting.

A step ahead

Reminders and short summaries, automatically.

From your phone

Capture and check anything, anywhere.

One system. Two layers. One front door.

Everything you handle, organized into two cooperating layers over a private foundation — reached the way you already work: by chat.

ACCESS · CHAT-FIRST

System app · WhatsApp · Desktop · *one front door*

↓

Read-only AI assistant
Reads across everything · answers in plain language · never changes anything

READ-ONLY

OPERATIONS LAYER · BUILT FOR YOU

- Financial hub
- Bank connectivity
- KYC on partners
- Tickets & follow-ups
- Calendar

WEALTH BACKBONE · PROVEN PLATFORM

- Consolidation
- Reporting
- Documents
- Every asset, one picture

↓

FOUNDATION · SECURITY & PRIVATE DATA

Encryption · MFA · Private instance · Granular access · Full audit trail

Every function — and what it does for you.

The capability on the left. The concrete moment it earns its place on the right.

FUNCTION	WHAT IT DOES	IN YOUR WORLD	PHASE
Financial hub	Money in and money out — resolved into a single, current net position.	Open **Money In** / **Money Out** and see July's cash flow, plus the **expected in & out** for the rest of the month.	PHASE 1
Tickets & follow-ups	Every request on a board: To do, Waiting on others, Done — captured from a single message.	Mark a wire **Reviewed**; the K-1 sits under **Waiting on the accountant** until it lands.	PHASE 1
The assistant — ask	Read-only. Ask anything in plain language; it reads across operations and wealth alike.	"**What's open with the Reyes trust?**" → 3 items waiting on others. "**Legal spend this quarter?**" → $48,200.	PHASE 1
The assistant — draft	Drafts the email as you'd write it — you approve, then send or save to edit.	Wire due today → "**Assistant, draft the approval email to the private bank**" → review, soften, send.	PHASE 1
Document intake	Statements and contracts arriving by email are read and filed into the platform automatically.	Gentros statements land in your **B27 Ops** inbox → read in and reconciled, no re-keying.	PHASE 1
Calendar & reminders	Dates and recurring items sit alongside the board; the system learns what repeats.	It knows the 30th brings a distribution out — and surfaces it before it's due.	PHASE 1
KYC on partners	Due diligence on companies before you commit — captured once, kept on file.	Vet a new counterparty once; never chase the same paperwork twice.	PHASE 1
Bank connectivity	Accounts connected by API so the cash position stays current on its own.	Each time the AmEx is used, the transaction verifies straight into the platform.	PHASE 2
Wealth backbone	A proven platform consolidating every account and asset — bankable and non-bankable — into one verified picture.	Yesterday's positions, ready today; net worth in one view across every custodian.	PHASE 2

Every dollar in, every dollar out — in one place.

Salary, contracts, endorsements and distributions on one side; taxes, debt, lifestyle and investments on the other — resolved into a single, current net position.

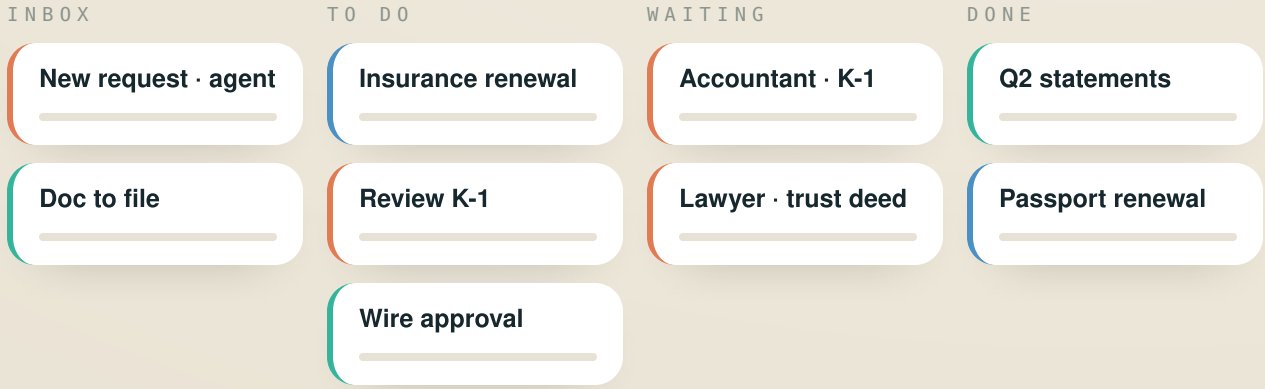

- Budgets built from what you actually owe
- Capture and categorize an expense in seconds
- Investments stay in sync — never double-counted

Every request tracked. Nothing falls through.

The one thing you asked for most: a clear view of what needs you **now**, what's pending, and what's waiting on someone else.

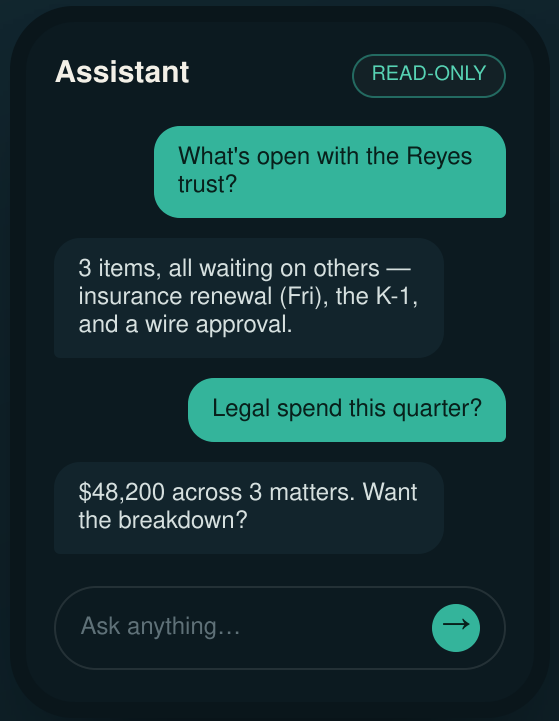

Capture a task, idea or request from a single message — nothing lost between meetings.

Ask anything.
From your phone.

A conversational assistant that can see everything — operations and wealth alike — and answers in plain language: what's due, what's pending, what a document says, where a portfolio stands.

Strictly read-only. It tells you and reminds you — it never books, moves or changes anything. Every action stays in your hands.

Built private from the first line

For a boutique office, privacy isn't a feature to add later — it's the foundation everything else stands on.

Encryption everywhere

At rest and in transit, on every layer of the system.

Multi-factor access

Strong, layered sign-in for everyone who touches it.

A private instance

Your own dedicated, isolated environment — not a shared pool.

Granular access

Each person sees only what they should, and no more.

Read-only AI by design

The assistant can see, but can never change a thing.

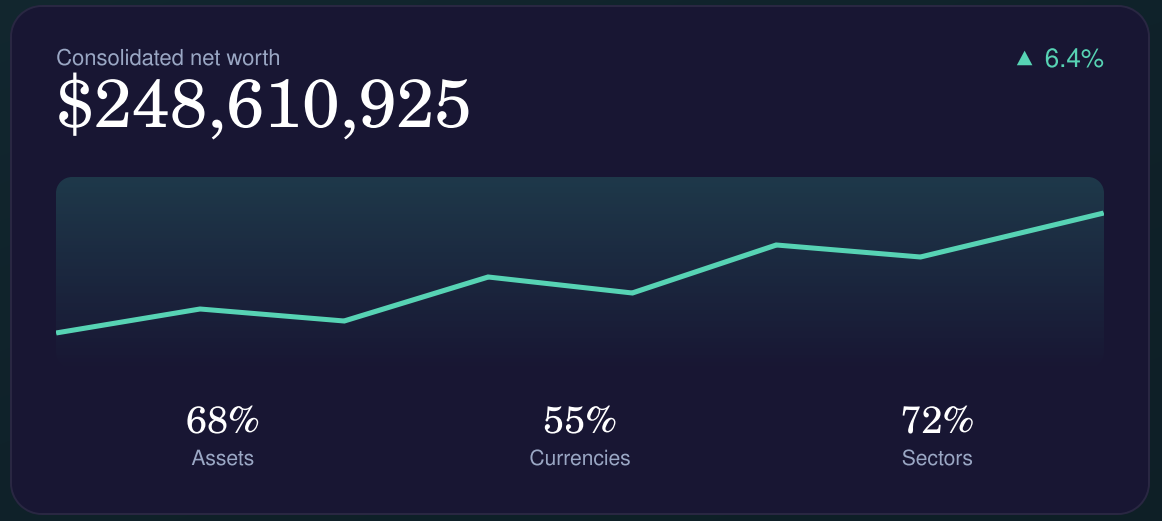

Full audit trail

Who saw what, and when — nothing happens off the record.

A proven platform underneath — already vetted.

Beneath the operations layer sits a best-in-class wealth platform that consolidates every account, statement and asset — bankable and non-bankable — into one verified picture.

The choice is de-risked. Phase 1 runs without it; the Aleta backbone connects in Phase 2 once the use case is fully shaped. The project stands on it — it doesn't hinge on it.

One system — or a dozen that don't talk.

Without a unified platform, the work doesn't disappear — it lands on you. You become the glue between the tools: re-entering data, chasing updates, holding the whole picture in your head.

THE TRADITIONAL WAY

tools to license, learn & connect yourself

10+

THE FAMILY OFFICE OS

everything, connected by design

1

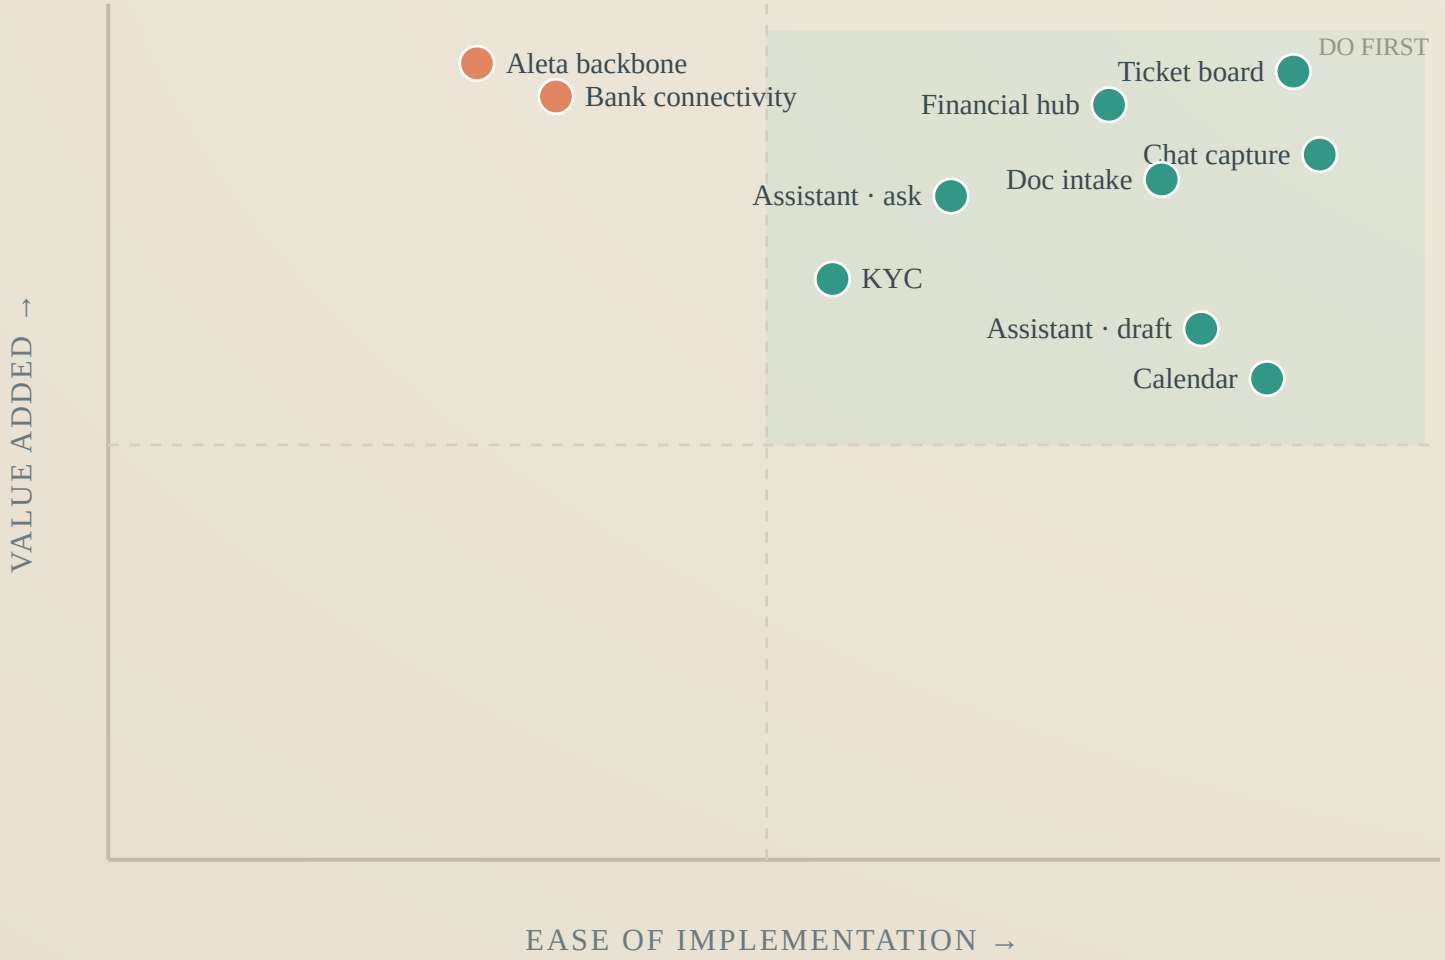

CHAT · ONE FRONT DOOR

- Operations
- Wealth
- Documents
- Security
- The assistant

- ✓ One login, one source of truth
- ✓ Every part connected — automatically
- ✓ The assistant sees across all of it
- ✓ One system to secure, one bill to pay

We sequence by value and ease.

Each capability placed by how much it moves the needle against how quickly it can be live. We start top-right — the highest value at the least effort.

PHASE 1 · NOW

Quick, high-impact wins

Ticket board, chat capture, financial hub, read-only assistant, document intake — live in 3–4 weeks, no external dependencies.

PHASE 2 · NEXT

High value, more to wire

Live bank connectivity and the Aleta wealth backbone — highest value, but they depend on third parties, so they follow once the base is proven.

From scattered to one system.
From chasing to a step ahead.

SCATTERED ACROSS TOOLS & HEADS →

Everything in one private place

On your phone, the moment you need it — every client, document and thread.

THINGS SLIP THROUGH →

Nothing falls through

You see what needs you now, and what's waiting on someone else.

ALWAYS REACTING →

Always a step ahead

The system remembers, reminds and summarizes — so you lead, not chase.

Let's build it.

A phased path that puts value in your hands early — the operations layer first, the rest connected as we go, reviewed together week by week.

PHASE 1 · 3–4 WEEKS

Your command center

Chat capture, the ticket board and the financial hub — running, no external dependencies.

PHASE 2

Connect everything

The full wealth backbone with Aleta, the assistant reading across it all.

PHASE 3

Refine & extend

Automate the routine and grow the system as the practice does — feature by feature, on your review.
